About

Gameplay programmer focused on UE5 and C++. August–October 2026: three completed projects (plugin, multiplayer, single-player) — playable build, code, and video demo for each. Focus: gameplay mechanics, replication, and reusable architecture (components, interfaces, DataAsset).

Skills

C++ / UE5: Gameplay Framework (GameMode, GameState, PlayerController, Character), components, interfaces, DataAsset, delegates, Enhanced Input.
Networking: replication (`Replicated`, `DOREPLIFETIME`), RPC (`Server_`, `Client_`), server-authoritative logic.
Blueprint: UMG (`BindWidget`), Timeline, Actor Blueprints.
Build: Packaging (Windows 64-bit), Build Cook Run.
Tools: Git, GitHub, Visual Studio.
English: C1 (teaching, technical documentation).

Projects

Interaction Toolkit (UE5, C++) — plugin

- Reusable plugin: interaction system + quest system.
- Interface `IInteractionInterface`, component `UInteractionComponent` (`OverlapMultiByChannel`, timer).
- `UQuestData` (DataAsset), `UQuestComponent` (delegates `OnQuestCompleted` / `OnObjectiveProgress`), HUD tracker.
- **Challenge:** abstract interaction from specific classes. **Solution:** interface + component — a new object can be connected without modifying existing classes.

Co-op Escape (UE5, C++) — multiplayer

- Co-op for 2–4 players (Listen Server), tested with 2–4 clients.
- Replication of character, items, hazards (`Replicated`, `DOREPLIFETIME`), RPC (`Server_` / `Client_`) for pause and restart.
- `GameState` / `PlayerState` for data synchronization, server-authoritative item pickup.
- **Challenge:** hazard synchronization under lag. **Solution:** server-authoritative logic + Client RPC.

Escape Extraction (UE5, C++) — single-player

- First-person character (C++), `UHealthComponent` — health component.
- `APickupActor` → `AKeyPickup` / `AHealthPickup` (polymorphism — new pickup type without modifying the base class), `AHazardActor` with `UHazardConfig` (DataAsset).
- `AExtractionTrigger` (win/lose), HUD, pause, restart, sound, effects.
- **Challenge:** hazard balancing without recompilation. **Solution:** moved parameters to `UHazardConfig` (DataAsset).
